

Enabling 32-bit Application Pools on Microsoft Windows Server 2003 x64

Description:

Internet Information Services in Microsoft Windows 2003 x64 is a 64-bit application. This means, if you want to run 32-bit ISAPI DLLs with IIS6 on Microsoft Windows 2003 x64, you will need to enable 32-bit Application Pools.

Prerequisite(s):

- Administrator access to IIS server.

Fix:

1. Login to the IIS sever as an administrator.
2. Open up a Command Prompt window, and type the following command to enable 32-bit Application Pools:

```
cscript %SystemDrive%\inetpub\AdminScripts\adsutil.vbs set  
w3svc/AppPools/Enable32bitAppOnWin64 1
```
